
We are currently accepting applications for our upcoming needs.

First wave – January

🌀 Position – Plant Manager

The Plant Manager will be responsible for planning, organizing, managing, controlling and evaluating plant activities. He will also be responsible for meeting objectives related to quality and to health and safety, and for monitoring the budget and all expenses.

🌀 Position - Process Engineers

The Process Engineers are responsible for the development, delivery and transfer of process engineering packages to clients (process book – PFD, P&IDs, Mass & Energy Balance, Equipment Datasheet, etc.) and are asked to design and specify process equipment (distillation columns, absorbers, heat exchangers, pumps, compressors, etc) with the goal of optimizing the plant processes.

🌀 Position - Control Engineer

The Control Engineer provides support for process control programming and automated data acquisition/processing in a state of the art biofuels plant and research facility. This is a dynamic, hands-on position that will implement generate controls and data acquisition for new processes in support of pilot and bench scale trials, as well as supervise work on instrumentation and electrical systems.

Second wave – April

🌀 Position – Chemical Process Operators

The Chemical Process Operators will participate in the start-up and operations of the gasification process with the production of second generation ethanol while ensuring proper functioning of the process. They will assist the maintenance team during the planned shut downs and operate the distributed control systems (DCS).

🌀 Position – Maintenance Technicians

The Maintenance Technicians are responsible for inspections, maintenance, repairs and installation of the plant's mechanical, hydraulic and pneumatic equipment. They will assist the pilot and catalytic crew.

🌀 Position – Instrumentation/electrical Technicians

The Instrumentation/Electrical Technicians will participate in instrumentation/electrical designing as well as engineering activities and supervise external engineering firms during the preparation of plans, instrumentation/electrical bid packages and any other related technical documents. They will help develop the company's technical and quality insurance standards for the instrumentation/electrical discipline and will develop and standardize the instrumentation/electrical distribution strategies.

🌀 Position – Maintenance / Operations Supervisor

The Maintenance / Operations Supervisor will supervise the operations team and the general maintenance of the plant. They will participate in the plant's start-up, plan and elaborate the procedures and train employees. They will be responsible for the production activities while ensuring that the standards and regulations are respected.

🌀 Position – Mechanical Engineer

The Mechanical Engineer will participate in mechanical design of process equipment and the coordination of equipment packages (package engineers). They will assist the engineering and project groups and complete mechanical design calculations on pressure vessels and piping in order to support the detailed engineering of the project.

🌀 Position – Production Manager

If this position is of interest to you, please submit your resume to careers@enerkem.com and indicate the position and related reference number. Thank you.
